The Hendricks County Surveyor's Office is looking to get quotes for phase one of the John Green reconstruction project which was approved through the Hendricks County Drainage Board as an ARP project.

All work must be completed according to the Engineering plans provided by Banning Engineering.

- 1. Starting at the tile outlet in the Batz open ditch, remove all existing tile (clay can be crushed and buried while all plastic must be hauled away) stopping on the west side of CR 1000E.
- 2. Install new 24" HDPE perforated dual wall pipe from outlet to west side of CR 1000E for approximately 1,508' ending at structure 101. (one stick of pipe will be added on the east side of structure 101)
- 3. Install tracer wire over top of stone.
- 4. Install 1 new 48" diameter manhole with Neenah N-4342 grate according to plans. This will be placed approximately 15 feet from the edge of pavement. Will need to connect one stick of pipe if feasible from manhole heading east toward CR 1000E to connect existing clay tile before getting into the road.
- 5. Install 8 ton of revetment rip rap and geotextile fabric around tile outlet from flow line to the top of ditch bank.
- 6. Install animal guard on the tile outlet.
- 7. Regrade roadside ditch around structure to get water to flow to the new manhole inlet.
- 8. Hook up all existing laterals to new 24" pipe.
- 9. Contractor must come back to level dirt after it settles.

The cost of stone and all materials will need to be included in the quote. All pipe to be bedded in stone and installed according to the manufacturer specifications and in accordance with the Hendricks County Storm Water Handbook. I will be doing a walkthrough on 8/13/25 at 10:30 am. I Would like to have SEALED QUOTES returned to me by 4pm on 8/18/25 to be opened at Drainage Board. This project will have a 45-day completion date for phase 1 from the time the lowest bidder is notified weather depending. Please make note on your bid that this is an ARP funded project.
